

Project Scope

Step 1 – From Client

- Provide the detection model (that processes video).
- Provide sample full-game videos.
- Optional: Roster mapping (jersey → player names).

Step 2 – What I'll Build

- Integrate your model so coaches can upload videos directly.
- Process videos through the model automatically.
- Build the **analysis layer**:
 - Core stats: points, rebounds, assists, blocks, steals, turnovers.
 - Advanced insights: shot charts (contested/uncontested), efficiency, drive tendencies, turnover breakdowns.
- Create a **dashboard** with player stats, team stats, and shot charts.
- Export stats into **JSON/CSV reports**.

Building a Comprehensive Sports Analysis System

Made with  Napkin

Step 3 – Flow

1. Upload video → processed by the model.
2. Model outputs detections → analysis converts into stats.
3. Stats → stored in DB + shown in dashboard.
4. Coaches → view stats, shot charts, and export reports.

Video Analysis Workflow
